

CLEANING GUIDANCE

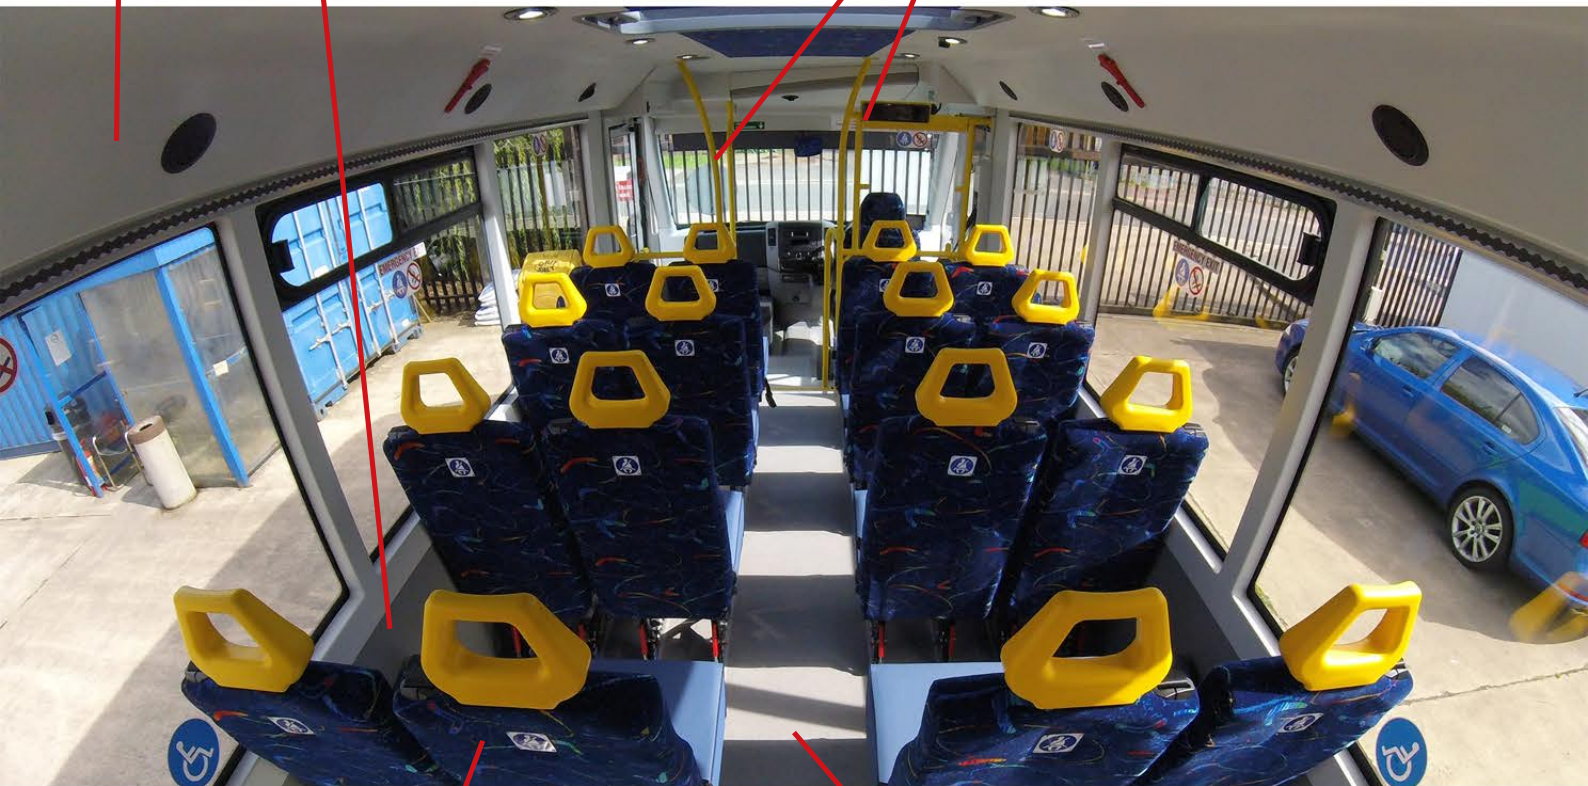

All Treka vehicles benefit from a design that focuses on cleanliness and the ability to disinfect the interior easily. This includes the use of full GRP/ABS linings (no nasty carpet!), linoleum flooring, and fully sealed edges throughout to eliminate any hiding places for dirt.

The **interior lining** of your Treka vehicle uses GRP and ABS components. Sealed edges allow for full clean down capabilities. Use either a consumer grade disinfectant or anti-bacterial product to clean any lining surface.

Handrails can be cleaned using one of the following:

- Consumer grade disinfectant wipes
- Anti-bacterial sprays
- Anti-bacterial cleaners (diluted in water)

Seating cloth, seat vinyl, seat belt webbing, and soft plastics clean with a warm damp cloth. No detergents or cleaning agents.

Hard plastics (receivers and buckles) use consumer grade disinfectant wipes, a second pass with a warm damp cloth.

Seat legs and feet use a warm damp cloth. No detergents or corrosive cleaners.

Linoleum flooring is sealed at all edges for easy cleaning. Use a consumer grade anti-bacterial floor cleaner or detergent such as Dettol. Follow all instructions provided by the manufacturer.

Floor tracks are sealed at edges. Use a consumer grade anti-bacterial floor cleaner. Do not allow water to stand inside the tracking channel.

- 
- Do not use any corrosive or bleaching products as they may cause damage to some vehicle components.
 - Any cleaning product has the potential to leave a light film behind once dried but this will not cause a slip risk.
